Documents are reviewed as per proposed review date, or sooner if a significant change to the operation has taken place, to ensure relevance to the systems and process that they define.

Event Summary

After injection operations of stage 31 for the hydraulic stimulation of PNR1z, a seismicity related traffic light system trailing event threshold was exceeded. The seismic event had a local magnitude of 0.78 ML. The seismic event hypocenter shown in the map and x-section by the blue dot, was roughly 502 m from the injection point.
